Atty Dkt. No.: 10011208-1 USSN: 10/087,619

## **AMENDMENTS**

## IN THE CLAIMS

1. (Currently Amended) A method of optically scanning a sample in connection with a biopolymer array, said method comprising:

providing a biopolymer array;

performing a first automated scan of said array to detect an analyte in said sample, wherein at least some results of said scan are saturated to obtain a first set of non-saturated results; and

performing a second automated scan of said array to detect an analyte in said sample at a decreased sensitivity from said first scan to obtain a second set of non-saturated results

- 2. (Original) The method of claim 1, wherein said first scan is performed at a scanning system maximum sensitivity.
- 3. (Original) The method of claim 1, wherein said second scan is performed with a sensitivity decreased between about 2 and 10 times that of said first scan.
- 4. (Original) The method of claim 1, further comprising: determining if results from said first automated scan are saturated.
- 5. (Original) The method of claim 1, further comprising: determining if results from said second automated scan are saturated.
- 6. (Original) The method of claim 1, further comprising: performing a third automated scan with sensitivity decreased from said second scan.
- 7. (Original) The method of claim 6, further comprising: determining if results from said third automated scan are saturated.
- 8. (Original) The method of claim 1, further comprising:

Atty Dkt. No.: 10011208-1 USSN: 10/087,619

performing a third automated scan with sensitivity increased from said second scan, wherein said sensitivity is lower than that of said first scan.

- 9. (Original) The method of claim 8, further comprising: determining if results from said third automated scan are saturated.
- 10. (Original) The method of claim 8, further comprising:

  performing a fourth automated scan with a sensitivity increased from said third scan, wherein said sensitivity is lower than that of said first scan.
- 11. (Original) The method of claim 8, further comprising:

  performing a fourth automated scan with a sensitivity decreased from said third scan, wherein said sensitivity is higher than that of said second scan.
- 12. (Original) The method of claim 1, wherein the biopolymer is selected from the group consisting of polypeptides and nucleic acids.
- 13. (Original) The method of claim 1, further comprising: transmitting results obtained by said optical scanning from a first location to a second location.
- 14. (Original) The method of claim 13, where said second location is a remote location.
- 15. (Currently Amended) A method of optically scanning a sample in connection with a biopolymer array, said method comprising:

providing a biopolymer array;

performing a first automated scan of said array to detect an analyte in said sample;

determining if any from said first scan are saturated; and

terminating scanning if no results are saturated, or performing a second automated scan at a decreased sensitivity from said first scan if any results are saturated.

Atty Dkt. No.: 10011208-1

USSN: 10/087,619

16. (Original) The method of claim 15, wherein said first scan is performed at a scanning system maximum sensitivity.

- 17. (Original) The method of claim 15, wherein said second scan is performed with a sensitivity decreased between about 2 and 10 times that of said first scan.
- 18. (Original) The method of claim 15, further comprising: determining if results from said second automated scan are saturated.
- 19. (Original) The method of claim 15, further comprising: performing a third automated scan with sensitivity decreased from said second scan.
- 20. (Original) The method of claim 19, further comprising: determining if results from said third automated scan are saturated.
- 21. (Original) The method of claim 15, further comprising:

  performing a third automated scan with sensitivity increased from said second scan, wherein said sensitivity is lower than that of said first scan.
- 22. (Original) The method of claim 21, further comprising: determining if results from said third automated scan are saturated.
- 23. (Original) The method of claim 21, further comprising:

  performing a fourth automated scan with a sensitivity increased from said third scan, wherein said sensitivity is lower than that of said first scan.

Atty Dkt. No.: 10011208-1 USSN: 10/087,619

24. (Original) The method of claim 21, further comprising:

performing a fourth automated scan with a sensitivity decreased from said third scan, wherein said sensitivity is higher than that of said second scan.

- 25. (Original) The method of claim 15, wherein the biopolymer is selected from the group consisting of polypeptides and nucleic acids.
- 26. (Original) The method of claim 15, further comprising: transmitting results obtained by said optical scanning from a first location to a second location.
- 27. (Original) The method of claim 26, where said second location is a remote location.
- 28. (Cancelled)
- 29. (Cancelled)
- 30. (Previously Presented) A system programmed to operate according to a method selected from a group of methods consisting of the optical scanning method of claims 1-27.
- 31. (Original) The system of claim 30 comprising at least one light excitation source and at least one fluorescence detector.
- 32. (Previously Presented) A computer-readable medium embodying a program to direct a machine to perform a method selected from a group of methods consisting of the optical scanning method of claims 1-27.
- 33. (Previously Presented) A computer-readable medium containing data representing sample results, wherein said data is made by a method selected from a group of methods consisting of the optical scanning method of claims 1-27.
